

🔧 Electronics & Embedded Systems Engineer

# Hi, I'm Muthuganesh

Embedded Systems Engineer specializing in PCB design, microcontroller programming, and IoT solutions. Experienced with PIC MCUs, Eagle, MPLAB X IDE, and A7672C GSM modules. Skilled in hardware design, UART debugging, PCB repair, and Python automation, focused on building smart, connected embedded systems.

## About Me

I'm an electronics enthusiast and embedded systems engineer with a passion for creating innovative hardware solutions. I specialize in circuit design, microcontroller programming, and IoT development, transforming ideas into functional prototypes and real-world applications.

From 7-segment displays to complex sensor integrations, I enjoy working on projects that bridge the gap between hardware and software, bringing concepts to life through hands-on engineering and experimentation.

### **Hardware Innovation**

Designing custom circuits and PCBs for unique solutions.

### **Embedded Programming**

Writing efficient firmware for microcontrollers and embedded systems.

### **Problem Solver**

Tackling technical challenges with creative engineering approaches.

**MGP TECH INNOVATION - 3 Digit 7 Segment Display**

Custom-designed 3-digit 7-segment display system featuring multiplexing techniques, precise timing control, and real-time number visualization. Built with microcontroller programming and custom circuit design.

## A7670C Call Test Using USB-to-TTL and Tera Term

I performed a voice call test using the SIMCom A7670C 4G LTE module connected to a PC via a USB-to-TTL converter. Communication was done through Tera Term using AT commands.
